Policy
Environment

AusPress Systems are committed to conducting our business in an environmentally aware and responsible manner. We seek the co-operation of our employees in ensuring our work practices are conducted with a continual reduction of environmental impact.

Core to this is the implementation of efficiencies, waste reduction and reuse strategies.

AusPress is committed to achieve this by following the principles of:

- Having facility to separate materials with the express intention of recycling and reuse – reuse and recycle at every opportunity.
- Consider the method of freight transport for both incoming and outgoing product and its effect on the environment.
- Consider packaging methods to reduce or eliminate unnecessary materials while maintaining the expectations of product quality and protection of the contents.
- Consolidating where possible for smaller and more efficient options.
- Encourage staff travel options beyond individual car transport.
- Understand the requirements and only order/consume what is the necessary.
- Chemicals to be used only when necessary, in suitable situation and disposed of as per the relevant Safety Data Sheet (SDS).
- Preference suppliers with environmental credentials and certification.
- Observe appropriate vehicle maintenance including washing, servicing and operation to protect the environment from chemical contamination, excessive dust, noise and impact.
- Review processes to reduce noise and light effecting adjacent residents and tenants where possible.

AusPress Systems seeks to identify our environmental impact and any potential risks at all our locations and implement control measures for any potential hazards.

The Environment Policy is an integral component of our HSEQ Management Manual, acknowledging but not certified to the requirements of ISO 14001.

Not sure? Ask someone that does! Work safely for a safe workplace for all.
